# INDUSTRY STANDARDS AND LEGISLATION

## 2020/2021

### CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Objective:

Students who complete the module:

#### LEARNING OBJECTIVES

##### KNOWLEDGE

Knowledge:

- know how the legislation is organised in the field of a given project
- have a basic understanding of the jurisdiction of authorities in the field

##### SKILLS

Skills:

- Sare able to identify and describe problems related to a project
- can identify the relevant legislation and standards for a given project
- can organize project work to comply with legislation and industry standards

##### COMPETENCES

Competencies:

- must be able to apply project work as a study form
- must be able to contribute successfully to teamwork within the problem area and make a common presentation of the result of the project work
- must be able to communicate the results of the project work in a project report

##### TYPE OF INSTRUCTION

Type of instruction:

Project work with supervision supplemented with instructions, workshops, presentation seminars, lab tests, etc.

##### EXTENT AND EXPECTED WORKLOAD

The module is 15 ECTS which is corresponding to 450 hours of study.

## EXAM

### EXAMS

|              |   |
|--------------|---|
| Name of exam | Industry Standards and Legislation  |
| Type of exam | Oral exam based on a project<br>Exam format:<br>Oral exam based on presentation seminar and project report. |
| ECTS         | 15  |

|                        |  |
|------------------------|--|
| Assessment             | 7-point grading scale  |
| Type of grading        | Internal examination   |
| Criteria of assessment | The criteria of assessment are stated in the Examination Policies and Procedures |

## FACTS ABOUT THE MODULE

|  |                                       |

# SYSTEMS ENGINEERING

## 2020/2021

### CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

#### LEARNING OBJECTIVES

##### KNOWLEDGE

- Know different models and tools for systems engineering.
- Understand the concept of product lifecycle.
- Understand the interaction of different engineering disciplines comprising systems engineering.

##### SKILLS

- Can apply tools to manage the complexity of a project in a systems engineering framework.
- Can account for the theory behind applied models.
- Are able use methods that allow early detection of possible failures.
- Can modify system design to mitigate potential risk of failures.

##### COMPETENCES

- Are able to use correct professional terminology.
- Are able to acquire additional knowledge in the field.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

### EXAM

# APPLIED STATISTICS AND PROBABILITY THEORY

2020/2021

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Have a basic understanding of probability, uncertainty, stochastic processes and independent and conditional probabilities.
- Know basic probability and statistical models for uncertainties.
- Have knowledge of discrete and continuous probability distributions and their application.
- Know of the basic principles of statistical analysis, including data collection.
- Have knowledge about statistical inferens and hypothesis testing.
- Know the principles of Markov chains and Monte Carlo methods to simulate probability distributions.
- Understands the limitations of models/tools within risk/safety, especially in relation to the input data's validity and credibility.

#### SKILLS

- Are able to use probability distributions to describe stochastic processes.
- Can estimate statistical parameters from a dataset.
- Can compute confidence intervals.
- Can account for the theory behind applied models.
- Are able to use relevant statistical software to approximate *a posteriori* probability distributions.

#### COMPETENCES

- Can assess the applicability of probability theory in a given situation.
- Are able to use correct professional terminology.
- Are able to acquire additional knowledge in the field.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

# RISK ANALYSIS

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Applied Statistics and Probability Theory and Systems Engineering.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Understand the process of risk analysis and its relation to risk management.
- Know qualitative and quantitative methods for risk analysis including cost-benefit analysis, HAZID/HAZOP, FMEA, FTA og SIL.
- Have knowledge of influence of organizational factors and human errors.

#### SKILLS

- Are able to perform risk analysis of various types of problems and systems.
- Are able to interpret and use the results from a risk analysis in a decision making process of risk management.

#### COMPETENCES

- Are able to model, calculate and communicate risk.

#### TYPE OF INSTRUCTION

Lectures, discussion, group-based project work, student presentations.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

## EXAM

# RISK ANALYSIS AND MANAGEMENT

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in the 1st semester.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Must have knowledge about the main methods to deal with risk in a management framework.
- Understand the methods for risk analysis and assessment.

#### SKILLS

- Are able to apply the principles behind risk management to independently identify risk and possible response strategies.
- Are able to perform practical risk analysis for identification, structuring and modelling risk.
- Are able to apply the analysis methods in the various situations related to risk.
- Are able to assess model parameters used in project risk management.
- Can formulate alternative solutions for risk mitigation based on identified risks.
- Are able to choose between alternatives using an appropriate decision making process.

#### COMPETENCES

- Must be able to apply proper terminology in oral, written and graphical communication and documentation of problems and solutions within risk analysis and management.
- Must be able to communicate the results of risk analyses and risk management decisions performed in the project work in a project report.
- Must be able to contribute successfully to teamwork within risk analysis and management including the decision making process in the problem area and make a common presentation of the result of the project work.

#### TYPE OF INSTRUCTION

Project work with supervision supplemented with instructions, workshops, presentation seminars, lab tests, etc.

#### EXTENT AND EXPECTED WORKLOAD

The module is 15 ECTS which is corresponding to 450 hours of study.

## EXAM

# RISK MANAGEMENT

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Risk Analysis.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Know the definitions of risk (and uncertainty)
- Have knowledge about qualitative and quantitative assessment of risk.
- Have a basic knowledge of probability theory related to risk.
- Understand basic concepts such as thresholds and acceptable risk.
- Have an understanding for risk management plans.
- Understand the basic mechanisms behind different risk perceptions and its implications for risk management and risk communication.
- Understand the importance of risk assessment and understand the importance of economic considerations regarding risk management.

#### SKILLS

- Are able to use correct terminology for risk management.
- Can evaluate existent risk management plans and response strategies.
- Are able to identify, analyse and prioritize risks.

#### COMPETENCES

- Can apply the principles behind risk management to undertake risk analyses and formulate response strategies.

#### TYPE OF INSTRUCTION

Lectures, discussion, group-based project work, student presentations.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

# DECISION MAKING

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Risk Management and Applied Statistics and Probability Theory.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Know basic concepts behind the decision making process.
- Know different decision making tools such as Bayesian networks, decision trees, cost benefit analyses and Monte Carlo simulations.
- Know different normative, descriptive, prescriptive decision making models.
- Understand the importance of ethical considerations in relation to applying cost benefit models and decision making tools when considering actions involving health and safety of people.

#### SKILLS

- Are able to evaluate the applicability of a decision making model for a specific case.
- Are able to use the different tools present in software packages.
- Can use the presented tools to support decision making in a risk management framework.

#### COMPETENCES

- Can develop and apply an appropriate decision making process in a specific case in a risk management context.
- Can select and apply an appropriate decision making model in a specific case.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with assignments, workshops, presentation seminars, lab tests.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

# OPERATIONAL RISK MANAGEMENT IN PROJECTS

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in the 1st and 2nd semester.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Have knowledge about methods to identify possible risk and hazards.
- Understand the factors that influence risk and hazards.
- Understand the methods for preventing and handling emergencies.

#### SKILLS

- Are able to apply the principles behind emergency management to independently identify emergency scenarios.
- Are able to plan and perform simulations of emergency scenarios.
- Are able to formulate plans to handle different hazards and emergency scenarios in a project setting.
- Can develop alternatives to critical processes in a project using the principles of risk management.

#### COMPETENCES

- Must be able to apply proper terminology in oral, written and graphical communication and documentation of problems and solutions within operational risk management.
- Must be able to communicate the results of the project work in a project report.
- Must be able to contribute successfully to teamwork within the problem area and make a common presentation of the result of the project work.

#### TYPE OF INSTRUCTION

Project work with supervision supplemented with instructions, workshops, presentation seminars, lab tests, etc.

#### EXTENT AND EXPECTED WORKLOAD

The module is 15 ECTS which is corresponding to 450 hours of study.

## EXAM

### EXAMS

# SIMULATION OF EMERGENCIES

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Applied Statistics and Probability Theory, Risk Management, and Risk Analysis.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Must have knowledge about evacuation strategies.
- Must have knowledge about the principles and models behind evacuation simulation software (like Simulex, Step, Exodus etc.).
- Understand the influence of human behavior in emergencies.

#### SKILLS

- Must be able to use software to simulate evacuation routes in case of emergencies.
- Are able to estimate the evacuation time of a building, area or vessel.
- Are able to identify possibilities and limitations related to simulations.

#### COMPETENCES

- Can critically evaluate and report results from an evacuation simulation.

### TYPE OF INSTRUCTION

Lectures, discussion, group-based project work, student presentations.

### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

## EXAM

# EMERGENCY MANAGEMENT

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Risk Management and Decision Making.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Have knowledge of the various stages of emergency management, mitigation, preparedness, response and recovery, and their mutual relation.
- Understand methods for developing and implementing contingency plans.

#### SKILLS

- Are able to identify possible emergency scenarios.
- Are able to decide between different strategies in a given scenario.
- Are able to apply appropriate methods within each stage of emergency management to a given scenario.

#### COMPETENCES

- Are able to use correct professional terminology.
- Can critically develop and evaluate contingency plans.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

# MASTER'S THESIS

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in the first three semesters of the master programme.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

After completion of the project, the student should within the following topics:

- Have knowledge and comprehension within the field of risk and safety management at the highest international level.
- Be able to critically evaluate knowledge and identify new scientific problems within risk and safety management.
- Have understanding of implications within the related research area including research ethics.

#### SKILLS

After completion of the project, the student should within the following topics:

- Independently explain choice of scientific theoretical and/or experimental methods to solve a risk and safety management problem.
- During the project, and when finalising it, make an independent and critical estimation of the chosen theories and methods as well as the analyses, results and conclusions.
- Be able to apply a wide range of engineering methods in research and development in the field of risk and safety management.
- Be able to, if necessary, develop new methods for solving a specific problem in the field of risk and safety management.
- Be able to communicate relevant scientific and professional aspects of project work in a clear and systematic way both to specialists and the public.

#### COMPETENCES

After completion of the project, the student should within the following topics:

- Be able to work independently with a project on a specific problem within risk and safety management at the highest international level.
- Independently be able to define and analyse scientific problems and based on that make and state the reasons for the decisions made.
- Be competent to solve new and complicated technical problems by the use of advanced mathematics, scientific and technological knowledge.
- Be able to evaluate the progress of the project independently and select and include additional literature, experiments or data when needed in order to maintain a scientific basis for the project.
- Be able to control complex and unexpected working situations and be able to develop new solutions.
- Must be able to communicate the results of the project work in a project report.

#### TYPE OF INSTRUCTION

Project work with supervision supplemented with instructions, workshops, presentation seminars, lab tests, etc.

## EXTENT AND EXPECTED WORKLOAD

The module is 30 ECTS which is corresponding to 900 hours of study.

## EXAM

# MAINTENANCE MANAGEMENT

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Applied Statistics and Probability Theory.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Have knowledge about basic maintenance planning and concepts.
- Understand the principles of maintenance optimization in relation to dependability, quality and safety.

#### SKILLS

- Are able to apply the concepts to a given system to optimize maintenance plans.
- Can apply modern methods like CMMS to organize maintenance plans.

#### COMPETENCES

- Are able to apply adequate terminology in oral and written communication.
- Are able to critically discuss different methods for maintenance planning.

#### TYPE OF INSTRUCTION

Lectures, discussion, group-based project work, student presentations.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

# RISK COMMUNICATION

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Risk Management.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Know about and understand the contextual challenges of risk communication.
- Know about and understand the cognitive and emotional processes of risk perception which should guide the development of risk communication strategies.
- Know about and understand theoretical approaches towards risk communication.
- Know about and understand evidence-based strategies and methods of risk communication.

#### SKILLS

- Will be able to identify, describe and discuss the different theoretical and strategic approaches to risk communication.
- Will be able to analyze the effectiveness of communication strategies and processes in different risk management contexts.
- Will be able to apply different risk communication strategies and methods to develop effective risk communication messages to facilitate risk management in projects.

#### COMPETENCES

- Will be able to apply adequate terminology in oral and written communication.
- Will be able to critically reflect and discuss different risk communication strategies in a management framework.
- Will be able to present the communication strategies developed in the project work in an oral presentation/written report.

#### TYPE OF INSTRUCTION

Lectures, discussion, group-based project work, student presentations.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

## EXAM

### EXAMS

# RISK AND RELIABILITY IN ENGINEERING

**2020/2021**

## PREREQUISITE/RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Applied Statistics and Probability Theory.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who complete the module:

### LEARNING OBJECTIVES

#### KNOWLEDGE

- Understand the concepts risk, uncertainty, reliability and safety.
- Know statistical methods for modeling physical, model, statistical and measurement uncertainties.
- Know methods for assessment of reliability of structural systems using probabilistic methods.
- Know methods for systems reliability for non-structural components and its applications in engineering.

#### COMPETENCES

- Will be able to participate in a dialog on modeling of uncertainties, risk analysis and assessment of reliability of structural and nonstructural components and systems.
- Will be able to model, calculate and communicate risk analysis, modeling of uncertainties and assessment of reliabilities for engineering problems.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars, lab tests.

#### EXTENT AND EXPECTED WORKLOAD

The module is 5 ECTS which is corresponding to 150 hours of study.

## EXAM
