MÅLTEORI OG STOKASTISKE PROCESSER

2022/2023

ANBEFALEDE FAGLIGE FORUDSÆTNINGER FOR AT DELTAGE I MODULET

The module builds on knowledge obtained by the modules Linear Algebra with Applications, Analysis 1, Analysis 2, and Probability Theory from the BSc in Mathematics-Economics.

MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

LÆRINGSMÅL

VIDEN

- know selected topics concerning general measure theory with special focus on probability theoretical. Topics as existence and uniqueness of measures, Lebesgue-integration, Expectation and condition expectation, Radon-Nikodyms theorem, and information expressed through sigma-algebras
- know about stochastic processes in discrete and continuous time
- know about Wiener processes
- know about Martingales
- know about stochastic integrals, Ito's formula and Girsanovs theorem

FÆRDIGHEDER

- are able to calculate fundamental characteristics for stochastic processes.
- are able to conduct a change of measure for a martingale

KOMPETENCER

- are able to formulate mathematical results in a correct manner by means of measure-theoretical and probabilistic argumentation.
- are able to apply and mediate basic mathematics and theory related to stochastic processes.
- able to gain additional knowledge regarding probability theoretical subjects related to stochastic processes and their application in Finance

UNDERVISNINGSFORM

As described in the introduction to Chapter 3.

OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EKSAMEN

PRØVER

Prøvens navn	Measure Theory and Stochastic Processes
Prøveform	Skriftlig eller mundtlig
ECTS	5
Bedømmelsesform	Bestået/ikke bestået

Censur	Intern prøve
Vurderingskriterier	Vurderingskriterierne er angivet i Universitetets eksamensordning

FAKTA OM MODULET

Engelsk titel	Measure Theory and Stochastic Processes
Modulkode	F-MOK-K1-3
Modultype	Kursus
Varighed	1 semester
Semester	Efterår
ECTS	5
Undervisningssprog	Dansk og engelsk
Undervisningssted	Campus Aalborg
Modulansvarlig	Bjarne Højgaard

ORGANISATION

Studienævn	Studienævn for Matematiske Fag
Institut	Institut for Matematiske Fag
Fakultet	Det Ingeniør- og Naturvidenskabelige Fakultet

ADVANCED TOPICS WITH APPLICATIONS

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules on the 2nd semester.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have expert understanding of relevant theories and methods within one of the main areas Financial Engineering or Operations Research
- knowledge of one or more applications of the theories within the scope of the first two semesters of the degree programme (for example, arbitrage theory and asset pricing, mean-variance analysis, martingale pricing, volatility analysis, quantitative risk management, operations management, project management, business intelligence , supply chain management, or data mining)

SKILLS

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to either the financial engineering subject area or the operations research subject area, including explaining the choices that have been made in connection to the delimitation of the problem
- must be able to independently make and justify the choice of theories and methods
- must be able to communicate research-based knowledge and discuss the professional and scientific problems with other people both within mathematics and economics

COMPETENCES

- must be able to control work and development situations which are complex, unpredictable and require new models within financial engineering or within operations research
- must be able to initiate and complete collaborations within financial engineering or operations research, and if relevant also other interdisciplinary collaborations, as well as assume professional responsibility
- must be able to independently assume responsibility for own professional development and specialisation

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 20 ECTS project module and the work load is expected to be 600 hours for the student.

EXAM

EXAMS

Name of exam	Videregående emner inden for matematik-økonomi med anvendelser (projekt)
Type of exam	Oral exam based on a project
ECTS	20
Assessment	7-point grading scale

Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Videregående emner inden for matematik-økonomi med anvendelser
Module code	F-MOK-K3-1
Module type	Project
Duration	1 semester
Semester	Autumn
ECTS	20
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	J. Eduardo Vera-Valdés, Nielsen

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

LONG MASTER'S THESIS. 50 ECTS

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have

o expert understanding within one or a few selected elements of a central mathematics-economics subject area based on high level research, or

o a broader insight into a central mathematical-economics subject area with respect to theories and methods and their interrelationships

- must be able to understand and on a scientific basis reflect upon the knowledge of the mathematical-economics subject area and be able to identify scientific problems

SKILLS

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to the mathematical-economics subject area, including explaining the choices that have been made in connection to the delimitation of the problem
- must be able to independently make and justify the choice of mathematical-economics theories and methods
- must be able to independently and critically evaluate the chosen theories and methods as well as the analyses, results and conclusions in the project, both during and at the end of the project period
- must be able to evaluate and choose between the scientific theories, methods, tools, and general skills within the mathematical-economics subject area

COMPETENCES

- must be able to control work and development situations which are complex, unpredictable and require new mathematical-economics models or methods for solution
- must be able to initiate and complete mathematically and economically oriented collaborations, and if relevant also other interdisciplinary collaborations, as well as assume professional responsibility
- must be able to independently assume responsibility for own professional development and specialisation

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 50 ECTS project module and the work load is expected to be 1500 hours for the student.

EXAM

EXAMS

Name of exam	Langt kandidatspeciale, 50 ECTS
Type of exam	Oral exam based on a project

MASTER'S THESIS, 30 ECTS

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

Students who have completed the module meet the following criteria concerning at least one central area within mathematics-economics:

LEARNING OBJECTIVES

KNOWLEDGE

- have

o expert understanding within one or a few selected elements of a central mathematics-economics subject area based on high level research, or

o a broader insight into a central mathematical-economics subject area with respect to theories and methods and their interrelationships

- must be able to understand and on a scientific basis reflect upon the knowledge of the mathematical-economics subject area and be able to identify scientific problems

SKILLS

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to the mathematical-economics subject area, including explaining the choices that have been made in connection to the delimitation of the problem
- must be able to independently make and justify the choice of mathematical-economics theories and methods
- must be able to independently and critically evaluate the chosen theories and methods as well as the analyses, results and conclusions in the project, both during and at the end of the project period
- must be able to evaluate and choose between the scientific theories, methods, tools, and general skills within the mathematical-economics subject area

COMPETENCES

- must be able to control work and development situations which are complex, unpredictable and require new mathematical-economics models or methods for solution
- must be able to initiate and complete mathematically and economically oriented collaborations, and if relevant also other interdisciplinary collaborations, as well as assume professional responsibility
- must be able to independently assume responsibility for own professional development and specialisation

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 30 ECTS project module and the work load is expected to be 900 hours for the student.

EXAM

EXAMS

Name of exam	Kandidatspeciale, 30 ECTS
Type of exam	Master's thesis/final project
ECTS	30
Permitted aids	All written and all electronic aids
Assessment	7-point grading scale
Type of grading	External examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Kandidatspeciale, 30 ECTS

EMPIRICAL FINANCIAL MODELLING AND APPLIED ECONOMETRICS

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have understanding of relevant theories and methods within one or more of these areas: option pricing and estimation of time-varying volatility models, zero coupon term structure models, dynamic term structure models, models for stock portfolios and intertemporal asset pricing models, event studies in corporate finance, or computational finance and Monte Carlo methods applied to pricing
- are able to understand and to reflect on these subject areas' issues on a scientific basis

SKILLS

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to financial econometrics or quantitative finance, including explanations of the choices that have been made
- must be able to independently perform and justify the choice of theories and methods
- must be able to communicate research-based knowledge and discuss the professional and scientific problems with other people both within mathematics and economics

COMPETENCES

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to financial econometrics or quantitative finance, including explanations of the choices that have been made
- must be able to independently perform and justify the choice of theories and methods
- must be able to communicate research-based knowledge and discuss the professional and scientific problems with other people both within mathematics and economics

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 15 ECTS project module and the work load is expected to be 450 hours for the student.

EXAM

EXAMS

Name of exam	Empirisk finansiering og anvendt økonometri
Type of exam	Oral exam based on a project
ECTS	15
Assessment	7-point grading scale
Type of grading	Internal examination

Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures
------------------------	--

FACTS ABOUT THE MODULE

OPERATIONS RESEARCH. PROJECT

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have gained in-depth knowledge of the development of quantitative operations management (OM) models on real life problems. The knowledge could be gained in a development project:
 - with one or more companies or public organisations
 - in a lab environment

SKILLS

- be able to develop, test and demonstrate the limitations of quantitative methods for Operations Management
- be able to compare and evaluate theoretical and experimental results
- be able to critically evaluate applied methods and their results

COMPETENCES

- possess the ability to identify opportunities for implementing quantitative methods from operations management
- be able to develop Operations Management techniques that can be implemented in an industrial, service or public organization
- be able to evaluate the impact of implementing the developed methods

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 15 ECTS project module and the work load is expected to be 450 hours for the student.

EXAM

EXAMS

Name of exam	Operationsanalyse. Projekt
Type of exam	Oral exam based on a project
ECTS	15
Assessment	7-point grading scale

FINANCIAL ECONOMETRICS AND QUANTITATIVE METHODS IN FINANCE

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules Analysis 2 and Probability Theory from the BSc in Mathematics-Economics.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- understanding of the most common applied quantitative and empirical methods in econometrics, including in particular financial econometrics
- knowledge about option pricing and estimation of time-varying volatility models
- know about zero coupon term structure models
- know about dynamic term structure models
- know about models for stock portfolios and intertemporal asset pricing models
- know about event studies in corporate finance
- know about computational finance and Monte Carlo methods applied, e.g., to the pricing of exotic options

SKILLS

- are able to argue for the importance of econometric/statistical methods in the analysis of a given financial problem
- are able to build econometric models and judge their applicability

COMPETENCES

- are able to demonstrate understanding of the theory of the econometric models and know how to reason within the models
- are able to communicate the results of an econometric analysis to non-specialists in the financial sector
- are able to analyse financial data using the available software

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

EXAM

EXAMS

Name of exam	Økonometri og kvantitative metoder inden for finansiering
Type of exam	Written or oral exam
ECTS	5
Assessment	7-point grading scale
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Økonometri og kvantitative metoder inden for finansiering
Module code	F-MOK-K1-4
Module type	Course
Duration	1 semester
Semester	Autumn
ECTS	5
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	Esben Høg

NUMERICAL ANALYSIS

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules Linear Algebra with Applications, Analysis 1, and Probability Theory from the BSc in Mathematics or similar.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have knowledge of floating point arithmetic, including the international standards for floating point arithmetic
- have knowledge of error analysis and stability of numerical algorithms
- have knowledge of polynomial interpolation and its application to the derivation of numerical algorithms
- have knowledge of basic results in approximation theory
- have knowledge of methods for finding zeroes of functions
- have knowledge of numerical linear algebra, in particular algorithms adapted to large sparse systems of linear equations
- have knowledge of methods for numerical differentiation, including spectral methods
- have knowledge of methods for numerical integration, including Gaussian quadrature
- have knowledge of numerical solution methods for ordinary differential equations, including spectral methods
- have knowledge of some probabilistic methods in numerical analysis, including Monte-Carlo methods

SKILLS

- can implement basic numerical algorithms in different computer architectures
- can choose appropriate numerical methods to solve a given class of problems

COMPETENCES

- can evaluate the appropriateness of a given numerical method for solving a class of problems
- are aware of the limitations of numerical methods to solve a class of problems

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS project module and the work load is expected to be 150 hours for the student.

EXAM

EXAMS

Name of exam	Numerical Analysis
Type of exam	Oral exam In order to participate in the exam, students must have actively participated in course progress by way of one or several independent oral and/or written contributions.
ECTS	5
Assessment	Passed/Not Passed
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Numerisk analyse
Module code	F-MAT-K1-2
Module type	Course
Duration	1 semester
Semester	Autumn
ECTS	5
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	Henrik Garde, Jensen

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

TOPICS IN OPERATIONS RESEARCH

2021/2022

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- manufacturing planning and control including inventory management and material requirements planning
- optimization of discrete problems

- heuristics and meta-heuristics

- relational databases and their usage

SKILLS

- formulate discrete optimization problems
- chose the appropriate solution strategy to a number of discrete optimization problems

- perform basic database operations

COMPETENCES

- understand the principles of inventory management
- understand differences in solutions strategies

- apply heuristics and meta-heuristic methods to solve complex problems

- understand relational data structures

- understand the limitations, advantages and disadvantages of relational data structures

TYPE OF INSTRUCTION

As described in §17.

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

EXAM

EXAMS

Name of exam	Topics in Operations Research
Type of exam	Written or oral exam

ADVANCED OPERATIONS MANAGEMENT

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- Have gained both theoretical and practical knowledge about stochastic simulation and its utilisation in improvement of planning and control systems in companies and supply chains
- Have gained knowledge of a number of numerical and mathematical methods and models for designing and improving planning and control concepts in companies and supply chains
- Have gained knowledge and understanding about numerical analysis of demand patterns
- Have gained knowledge about advanced order management systems
- Have gained knowledge about stochastic discrete event simulation and simulation tools
- Have gained knowledge to identify key performance indicators relevant to evaluate stochastic simulation models.

SKILLS

- Be able to analyse and develop order management systems for both industrial and service companies
- Be able to conduct a numerical analysis of a company's and supply chain's performance. This involves both choice and utilisation of statistical analysis methods on selected elements of companies and supply chains
- Show understanding the utilisation of probabilistic models in connection with design and usage of planning and control systems. This includes knowledge and insight into the opportunities and limitations of probabilistic models
- Be able to utilise stochastic discrete event simulation to assess opportunities and limitations of a production system and be able to utilise simulation as a tool for analysis and synthesis in their project work
- Be able to be model and simulate a specific company's production system and evaluate the performance of this system
- Be able to design and redesign planning and control systems in production and service management companies and supply chains adapted to a company's or supply chain's specific situation.

COMPETENCES

- Be able to combine a number of mathematical tools in an appropriate manner to conduct an analysis of the as-is situation of a company or supply chain.

TYPE OF INSTRUCTION

The course consists of a number of lectures as well as the student's independent learning effort. The form and extent of the course is determined and described in connection with planning the semester. The lesson plans, literature etc. are created in connection with this. The course is conducted as a combination of single-disciplinary, problem-oriented and cross-disciplinary fields of study, and it is structured from a work and evaluation form which combines skills and reflection:

- Lectures
- Class work
- Project work
- Workshops
- Exercises (alone and in groups)
- Teacher feedback
- Reflection on content
- Portfolio work.

EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS course module the expected workload is 150 hours for the student.

EXAM

EXAMS

FLEXIBLE MANUFACTURING

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- Have gained knowledge about mass customization systems in an operations management context
- Have gained knowledge about assessment of mass customization performance
- Have gained knowledge about product architecture, manufacturing architecture and their relations to mass customization
- Have gained knowledge about flexible manufacturing systems, reconfigurable manufacturing systems, changeable manufacturing systems, automated manufacturing systems and the differences between these.
- Have gained knowledge of planning methods designed specifically for flexible manufacturing systems.

SKILLS

- Be able to analyze a product family in terms of variety and product architecture
- Be able to evaluate different IT solutions supporting mass customization, including product configurators and perform basic modelling
- Be able to analyze a range of manufacturing tasks and evaluate different types of manufacturing systems to determine the appropriate level of flexibility vs. automation
- Be able to model flexible manufacturing problems

COMPETENCES

- Have the competence to evaluate a company's product portfolio in terms of volume, variety and manufacturing tasks and identify solutions for IT system support and manufacturing system design.

TYPE OF INSTRUCTION

The course consists of a number of lectures as well as the student's independent learning effort. The form and extent of the course is determined and described in connection with planning the semester. The lesson plans, literature etc. are created in connection with this. The course is conducted as a combination of single-disciplinary, problem-oriented and cross-disciplinary fields of study, and it is structured from a work and evaluation form which combines skills and reflection:

- Lectures
- Class work
- Project work
- Workshops
- Exercises (alone and in groups)
- Teacher feedback
- Reflection on content
- Portfolio work.

EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS course module the expected workload is 150 hours for the student.

TOPICS IN STATISTICAL SCIENCES I

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- dynamical linear models, including the Kalman filter
- population methods, specifically evolutionary computing and genetic algorithms
- meta analysis
- robust statistical methods including non-parametric models
- factor analysis
- graphical models, including hierarchical models

SKILLS

- can apply the relevant methodologies to one or more datasets by using appropriate software implementations, and interpret the output and modify the model parameters accordingly
- are able to state the underlying assumptions and argue about limitations and extendibility of the methodology in one or more specific settings
- can assess goodness-of-fit for the models where appropriate

COMPETENCES

- can acquire supplementary knowledge about the relevant methodologies
- can combine appropriate topics from the course to analyse a specific dataset.
- can in writing describe the methodologies, results and outcome from an analysis of a specific dataset

TYPE OF INSTRUCTION

Lectures with exercises.

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

TOPICS IN STATISTICAL SCIENCE II

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the module Topics in Statistical Science I.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

The students completing the module will have gained knowledge about a number of topics from the statistical sciences at an advanced level. The list may include, but is not limited to, the following topics:

LEARNING OBJECTIVES

KNOWLEDGE

- state space models and hidden Markov models
- expectation-maximisation (EM) algorithm and missing data
- multivariate Gaussian distribution (and related distributions, e.g. Hotelling's T² and Wishart distributions)
- INLA
- generalised estimating equations
- bootstrap, cross-validation and other resampling techniques

SKILLS

- can apply the relevant methodologies to one or more datasets by using appropriate software implementations, and interpret the output and modify the model parameters accordingly
- are able state the underlying assumptions and argue about limitations and extendibility of the methodology in one or more specific settings
- can assess goodness-of-fit for the models where appropriate

COMPETENCES

- can acquire supplementary knowledge about the relevant methodologies
- can combine appropriate topics from the course to analyse a specific dataset
- can in writing describe the methodologies, results and outcome from an analysis of a specific dataset

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

EXAM

EXAMS

Name of exam	Emner inden for statistisk videnskab II
Type of exam	Written or oral exam
ECTS	5
Assessment	7-point grading scale
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Emner inden for statistisk videnskab II
Module code	F-MAT-K1-6
Module type	Course
Duration	1 semester
Semester	Autumn
ECTS	5
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	Torben Tvedebrink , Højsgaard

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

STATISTICS FOR DURATION DATA

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- understand the special features of duration data (e.g. censoring, non-normality)
- derive the likelihood function for right-censored data
- know basic characterisations of duration data distributions such as the survival and hazard function
- be able to derive basic non-parametric estimates such as the Kaplan-Meier and Nelson-Aalen estimates
- know parametric models for duration data
- understand the assumptions underlying the Cox partial likelihood
- derive the Cox partial likelihood
- know methods of model assessment for parametric models and the Cox proportional hazards

SKILLS

- be able to identify relevant type of censoring for a specific set of duration data
- be able to estimate and interpret survival functions or cumulative hazard functions for a specific set of duration data
- be able to fit duration data using parametric or semi-parametric regression models
- be able to assess the validity of a model for a specific set of duration data

COMPETENCES

- be able to identify an appropriate duration data methodology for investigating a specified hypothesis of interest
- be able to interpret and critically assess results of the analysis carried out using the chosen methodology
- be able to convey the results of the analysis to a non-statistician

TYPE OF INSTRUCTION

Lectures with exercises.

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

EXAM

EXAMS

Name of exam	Varighedsanalyse/Statistics for Duration Data
Type of exam	Active participation/continuous evaluation
ECTS	5
Assessment	Passed/Not Passed
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Varighedsanalyse
Module code	F-MAT-K1-4
Module type	Course
Duration	1 semester
Semester	Autumn
ECTS	5
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	Rasmus Waagepetersen

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

IN-DEPTH STUDY OF FINANCIAL ENGINEERING

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules on the 1st semester.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have expert understanding of relevant theories and methods within quantitative finance and computational statistics or continuous time finance in general
- are able to understand and on a scientific basis reflect on these subject areas' scientific issues

SKILLS

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to a quantitative finance subject area, including explaining the choices that have been made in connection to the delimitation of the problem
- must be able to independently make and justify the choice of theories and methods
- must be able to communicate research-based knowledge and discuss the professional and scientific problems with other people both within mathematics and economics

COMPETENCES

- must be able to identify, formulate and analyse a scientific problem independently, systematically and critically
- must be able to relate the problem to a quantitative finance subject area, including explaining the choices that have been made in connection to the delimitation of the problem
- must be able to independently make and justify the choice of theories and methods
- must be able to communicate research-based knowledge and discuss the professional and scientific problems with other people both within mathematics and economics

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 15 ECTS project module and the work load is expected to be 450 hours for the student.

EXAM

EXAMS

Name of exam	Fordybelse inden for Financial Engineering
Type of exam	Oral exam based on a project
ECTS	15
Assessment	7-point grading scale

Type of grading	External examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Fordybelse inden for Financial Engineering
Module code	F-MOK-K2-1
Module type	Project
Duration	1 semester
Semester	Spring
ECTS	15
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	Esben Høg , Nielsen

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

SUPPLY CHAIN OPERATIONS AND ANALYSIS

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules on the 1st semester.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- have gained in-depth knowledge of supply chain operations and analyzing the behavior of supply chains.
- The knowledge could be gained in a development project:
with one or more companies or public organisations

or

in a lab environment concerning supply chain software or techniques

SKILLS

- should be able to analyse and model the behaviour of supply chains using data mining,
- should be able to model a Business Intelligence setup,
- should be able to critically evaluate the applied methods and their results

COMPETENCES

- possess the ability to identify and implement monitoring and analysis with special focus on cross-company issues (e.g. one or more customers or suppliers)
- should be able to implement supply chain systems in an industrial, service or public organisation

TYPE OF INSTRUCTION

Project work.

EXTENT AND EXPECTED WORKLOAD

This is a 15 ECTS project module and the work load is expected to be 450 hours for the student.

EXAM

EXAMS

Name of exam	Supply Chain Operations and Analysis
Type of exam	Oral exam based on a project
ECTS	15

Assessment	7-point grading scale
Type of grading	External examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

FACTS ABOUT THE MODULE

Danish title	Supply Chain Operations and Analysis
Module code	F-MOK-K2-2
Module type	Project
Duration	1 semester
Semester	Spring
ECTS	15
Language of instruction	Danish and English
Location of the lecture	Campus Aalborg
Responsible for the module	Esben Høg , Nielsen

ORGANISATION

Study Board	Study Board of Mathematical Sciences
Department	Department of Mathematical Sciences
Faculty	The Faculty of Engineering and Science

QUANTITATIVE FINANCE AND COMPUTATIONAL STATISTICS

2022/2023

MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

LÆRINGSMÅL

VIDEN

- know about quantitative software development with a focus on computational finance
- know about core models & products: stochastic volatility models, vanilla & exotic derivatives
- know about numerical treatment of stochastic differential equations (SDEs) and partial differential equations (PDEs)
- know about Monte Carlo foundations and applications
- know about Fourier transform pricing
- calibration (applied numerical optimization, market data)

FÆRDIGHEDER

- are able to analyse a given model and apply it on market data
- are able to develop quantitative software in line with the existing practices in the financial industry
- are able to perform all stages of the verification and validation (V&V) process in quantitative software development – assessing the results obtained from a financial model

KOMPETENCER

- are able to independently develop, analyse, and apply quantitative finance models relevant to a financial problem at hand
- are able to communicate the results of applying the models appropriate to a given financial problem to non-specialists in the financial industry
- discuss relative strengths and weaknesses of numerical methods (SDEs, PDEs, Fourier Transform) in relation to financial products (derivatives) and tasks (pricing, hedging, calibration)

UNDERVISNINGSFORM

Forelæsninger med tilhørende opgaveregning.

OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EKSAMEN

PRØVER

Prøvens navn	Quantitative Finance and Computational Statistics
Prøveform	Skriftlig eller mundtlig Individual oral or written exam, or individual ongoing during the course. In order to participate in the course evaluation, students must have actively participated in course progress by way of one or several independent oral and/or written contributions.
ECTS	5

Bedømmelsesform	Bestået/ikke bestået
Censur	Intern prøve
Vurderingskriterier	Vurderingskriterierne er angivet i Universitetets eksamensordning

FAKTA OM MODULET

Engelsk titel	Quantitative Finance and Computational Statistics
Modulkode	F-MOK-K2-3
Modultype	Kursus
Varighed	1 semester
Semester	Forår
ECTS	5
Undervisningssprog	Dansk og engelsk
Tomplads	Ja
Undervisningssted	Campus Aalborg
Modulansvarlig	Maria Simonsen

ORGANISATION

Studienævn	Studienævn for Matematiske Fag
Institut	Institut for Matematiske Fag
Fakultet	Det Ingeniør- og Naturvidenskabelige Fakultet

CONTINUOUS TIME FINANCE

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules on the 1st semester and in particular Measure Theory and Stochastic Processes.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- know about the Black-Scholes model
- know about risk-neutral pricing
- know about the martingale representation theorem and the martingale approach to arbitrage theory
- know about the market price of risk
- know about options, exotic options, and American derivatives
- know about hedging
- know about standard models of the term structure of interest rates

SKILLS

- are able to work in-depth in other financial theory topics, e.g., credit risk models or advanced option theory
- are able to construct a relevant continuous time financial model based on a concrete problem.
- are able to analyse the models through martingales and arbitrage theory
- are able to judge the validity of results obtained

COMPETENCES

- are able to communicate results of analysis of continuous time financial models to non-specialists in the financial world
- are able to develop the ability to individually develop own continuous time models suited for a given financial problem

EXTENT AND EXPECTED WORKLOAD

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EXAM

EXAMS

Name of exam	Kontinuert-tids finansiering
Type of exam	Written or oral exam

DATA MINING

2022/2023

ANBEFALEDE FAGLIGE FORUDSÆTNINGER FOR AT DELTAGE I MODULET

Modulet bygger på viden opnået i modulet Statistisk inferens for lineære modeller.

MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

LÆRINGSMÅL

VIDEN

- har opnået en forståelse af computerintensive teknikker til at validere modeller (kryds-validering og bootstrap) samt kunne redegøre for varians-bias problematikken
- har kendskab til forskellige metoder til at visualisere høj-dimensionale data
- har forståelse for forskellen mellem klassifikation og regression, samt kende til metoder til at udføre klassifikation vha. klassifikationstræer, prototype metoder samt Bayes classifiers
- kan redegøre for supervised og unsupervised metoder inden for statistical learning
- kan redegøre for analysen af transaktionsdata vha. associationsregler
- kan udføre link mining for netværksdata fx. internetsider
- har viden om metoder til at udføre hierarkisk og partitionel klyngeanalyse
- har viden om model averaging og bagging samt boosting

FÆRDIGHEDER

- er i stand til at identificere og anvende en relevant data mining algoritme i en specifik kontekst
- kan identificere og diskutere svagheder/styrker ved forskellige data mining algoritmer i relation til en specifik analyse opgave
- kan fortolke og kommunikere resultaterne af en given data mining analyse til ikke-specialister

KOMPETENCER

- har evnen til at kunne overskue potentialer og begrænsninger af forskellige data mining software pakker
- har forståelsen til kvalificeret at vælge og anvende et specifikt stykke software som imødekommer brugerkrav

OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EKSAMEN

MANUFACTURING AND SUPPLY CHAIN SYSTEMS

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- Have gained knowledge of the structure and functionality of manufacturing and supply chain systems such as Enterprise Resource Planning, Advanced Planning & Scheduling, Vendor Managed Inventory, Optimisation Suites and Shop Floor Planning & Control
- Have gained knowledge of planning technologies and configuration of manufacturing and supply chain systems
- Have gained knowledge of how to share information and coordinate decisions in a supply chain

SKILLS

- Be able to work with differentiated manufacturing and supply chain control
- Be able to work with manufacturing and supply chain control principles
- Be able to work with information sharing levels

COMPETENCES

- Be able to select and design differentiated manufacturing and supply chain control principles
- Be able to develop planning and control solutions

TYPE OF INSTRUCTION

The course consists of a number of lectures as well as the student's independent learning effort. The form and extent of the course is determined and described in connection with planning the semester. The lesson plans, literature etc. are created in connection with this. The course is conducted as a combination of single-disciplinary, problem-oriented and cross-disciplinary fields of study, and it is structured from a work and evaluation form which combines skills and reflection:

- Lectures
- Class work
- Project work
- Workshops
- Exercises (alone and in groups)
- Teacher feedback
- Reflection on content
- Portfolio work.

EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS course module the expected workload is 150 hours for the student.

EXAM

EXAMS

BUSINESS INTELLIGENCE AND ANALYTICS

2022/2023

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

- Account for Business Intelligence (BI) concepts, theories and methods including:
 - Creation of knowledge from either people/employees/"experts" or from analysing existing data
 - Knowledge representation
 - Traditional BI handling systems such as expert systems, knowledge base systems, decision support systems and executive information systems.

SKILLS

- Make decisions about the optimal use of the BI concepts, theories, methods and selected systems for identification of needs, development of alternative solutions, evaluation selection and implementation
- Use BI in disciplines such as enterprise engineering/modelling, business analytics, data mining, etc.

COMPETENCES

- Apply knowledge and skills in relation to business intelligence development projects and thereby apply the knowledge handling activities: knowledge acquisition, knowledge verification, knowledge representation and knowledge engineering.

TYPE OF INSTRUCTION

The teaching is organized in accordance with the general form of teaching. Please see the programme curriculum §17.

EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS course module the expected workload is 150 hours for the student.

EXAM

EXAMS

Name of exam	Business Intelligence and Analytics
Type of exam	Written or oral exam

RUMLIG STATISTIK OG MARKOVKÆDE MONTE CARLO METODER

2022/2023

ANBEFALEDE FAGLIGE FORUDSÆTNINGER FOR AT DELTAGE I MODULET

Modulet bygger på viden opnået i modulet Statistisk inferens for lineære modeller.

MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

Kurset omhandler Markov kæde Monte Carlo metoder samt et eller flere af de tre hovedområder inden for rumlig statistik.

LÆRINGSMÅL

VIDEN

- kender de fundamentale modeller og metoder inden for de valgte hovedområder (geostatistik, latticeprocesser eller rumlige punktprocesser) samt Markov kæde Monte Carlo
- har viden om følgende emner inden for de valgte hovedområder:

- Geostatistik:

teori for anden-ordens stationære processer, variogram/kovariogram, prediktion og kriging, samt modelbaseret geostatistik

- Latticeprocesser:

Markovfelter, Brooks faktorisering og Hammersley-Cliffords sætning og likelihoodbaseret statistisk analyse

- Rumlige punktprocesser:

Poissonprocesser, Coxprocesser og Markov punktprocesser samt statistisk analyse baseret på ikke-parametriske metoder (summary statistics) samt likelihoodbaserede metoder

- Markov kæde Monte Carlo:

grundlæggende teori for Markovkæder med henblik på simulation, Markovkæde Monte Carlo metoder til simulation af fordelinger, herunder Metropolis-Hastings algoritmen og Gibbs sampleren

FÆRDIGHEDER

- kan redegøre for de centrale teoretiske resultater i kurset
- kan udføre statistiske analyser af konkrete datasæt

- kan simulere de gennemgåede modeller

KOMPETENCER

- skal på baggrund af teoretiske resultater inden for rumlig statistik kunne fortolke en rumlig statistisk model i relation til et konkret datasæt og kunne redegøre for modellens eventuelle begrænsninger med hensyn til at beskrive variationen i datasættet
- skal kunne simulere fordelinger ved hjælp af Markovkæde Monte Carlo metoder og vurdere outputtet af Markovkæden

UNDERVISNINGSFORM

Som beskrevet i §17.

OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EKSAMEN

PRØVER

Prøvens navn	Rumlig statistik og markovkæde Monte Carlo metoder
Prøveform	Skriftlig eller mundtlig Individuel mundtlig eller skriftlig prøve, eller løbende evaluering.
ECTS	5
Bedømmelsesform	Bestået/ikke bestået
Censur	Intern prøve
Vurderingskriterier	Vurderingskriterierne er angivet i Universitetets eksamensordning

YDERLIGERE INFORMATIONER

Hvis kurset følges i en kandidatstudieordning, skal den studerende opfylde [ekstra kompetencemål](#).

FAKTA OM MODULET

Engelsk titel	Spatial Statistics and Markov Chain Monte Carlo Methods
Modulkode	F-MAT-B6-9

COMPUTATIONAL STATISTICS AND OPERATIONS RESEARCH

2022/2023

RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module builds on knowledge obtained by the modules in Mathematical Analysis, Probability Theory, Statistical Inference for Linear Models from the BSc programmes.

CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

LEARNING OBJECTIVES

KNOWLEDGE

Students completing the module know about

- quantitative software development and computational statistics
- manufacturing planning and control including inventory management and material requirements planning
- optimization of discrete problems
- heuristics and meta-heuristics
- relational databases and their usage

SKILLS

Students completing the module are able to

- implement numerical algorithms
- formulate discrete optimization problems
- choose the appropriate solution strategy to a number of discrete optimization problems
- perform basic database operations

COMPETENCES

Students completing the module are able to

- understand the principles of inventory management
- understand differences in solutions strategies
- apply heuristics and meta-heuristic methods to solve complex problems
- understand relational data structures

understand the limitations, advantages and disadvantages of relational data structures

TYPE OF INSTRUCTION

Cf. §17.

EXTENT AND EXPECTED WORKLOAD

This is a 5 ECTS course module and the work load is expected to be 150 hours for the student.

EXAM**EXAMS**

Name of exam	Computational Statistics and Operations Research

BAYESIANSK INFERENS OG MODELLER MED TILFÆLDIGE EFFEKTER

2022/2023

ANBEFALEDE FAGLIGE FORUDSÆTNINGER FOR AT DELTAGE I MODULET

Modulet bygger på viden opnået i modulet Statistisk inferens for lineære modeller.

MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

LÆRINGSMÅL

VIDEN

- har viden om den generelle lineære model med tilfældige effekter
- har viden om maksimum likelihood inferens for den generelle lineære model med tilfældige effekter
- har viden om prædiktion af tilfældige effekter
- har viden om Bayesiansk inferens
- har viden om prior fordelinger i Bayesiansk inferens
- har viden om beregningsmæssige aspekter af Bayesiansk inferens

FÆRDIGHEDER

- skal for et konkret datasæt kunne identificere mulige kilder til tilfældig variation og opstille en relevant model med tilfældige effekter
- skal kunne gennemføre maximum likelihood- og Bayesiansk inferens for den opstillede model

KOMPETENCER

- skal kunne redegøre for teori og praksis for forskellige tilgange til inferens baseret på modeller med tilfældige effekter

UNDERVISNINGSFORM

Som beskrevet i §17.

OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

EKSAMEN

PRØVER

Prøvens navn	Bayesiansk inferens og modeller med tilfældige effekter
Prøveform	Aktiv deltagelse/løbende evaluering
ECTS	5
Bedømmelsesform	Bestået/ikke bestået
Censur	Intern prøve
Vurderingskriterier	Vurderingskriterierne er angivet i Universitetets eksamensordning

YDERLIGERE INFORMATIONER

Hvis kurset følges af studerende på kandidatuddannelse skal følgende ekstra kompetencemål opfyldes:

- Be able to reflect on the discipline's approach to academic problems at a high level and the discipline's relationship to other subject areas.
- Be able to involve the knowledge area in solving complex problems and thus achieve a new understanding of a given subject area.
