# HUMAN IMPACT ON THE ENVIRONMENT

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

The aim is to qualify the student to understand, measure and model the effect of e.g. land use change or increased load of chemicals on natural and artificial ecosystems.

The project focuses on how land-use change and increased load of chemicals may affect selected ecosystems and suggest actions relating to remediation technologies and management to prevent and alleviate the ecosystem distresses caused by e.g. land-use change or chemicals.

The project could be comparison of organic vs. conventional farming. The effect of household chemicals and pesticides on urban recreational areas.

## LEARNING OBJECTIVES

### KNOWLEDGE

Students who have passed the module should be able to

- Explain how land use may affect natural ecosystems
- Explain how chemical loads may affect the ecosystem structure and how the effects can be mediated.
- Explain what administrative structures, including legislation can be used to handle these environmental problems

### SKILLS

- write a project report following the standards of the field of study, include relevant original scientific literature, use the correct terminology, and communicate the research-based foundation and problem and results in writing, graphically and orally in a professionally reasoned and coherent way
- assess and select relevant original scientific literature and current scientific methods, models and other tools used in the project and assess the problem of the project and results in relevant scientific contexts and social conditions

### COMPETENCES

- handle the planning, implementation and management of complex and unpredictable research and/or developmental tasks and take professional responsibility to implement academic assignments and interdisciplinary collaborations
- take responsibility for own professional development and specialization

## TYPE OF INSTRUCTION

Project work

## EXAM

### EXAMS

Name of exam	Human Impact on the Environment
Type of exam	Oral exam based on a project
ECTS	15
Assessment	7-point grading scale
Type of grading	External examination

Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures
------------------------	--

## FACTS ABOUT THE MODULE

Danish title	Menneskeskabte miljøpåvirkninger
Module code	K-BIO-K1-53A
Module type	Project
Duration	1 semester
Semester	Autumn
ECTS	15
Language of instruction	Danish and English
Empty-place Scheme	Yes
Location of the lecture	Campus Aalborg
Responsible for the module	<a href="#">Iversen</a>

## ORGANISATION

Study Board	Study Board of Biotechnology, Chemistry and Environmental Engineering
Department	Department of Chemistry and Bioscience

# GLOBAL CHANGE BIOLOGY

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

The aim is to qualify the student to understand how global changes affect biological systems.

### LEARNING OBJECTIVES

#### KNOWLEDGE

Students who have passed the module should be able to

- Explain the how greenhouse gas emission is linked to climate change, and how climate changes affect greenhouse gas emissions
- Explain how climate changes can influence populations and community dynamics
- Explain how climate changes can influence populations and community dynamics
- Explain how a changing climate impact on agriculture and horticulture
- Describe for how climate historically has changed and impacted on life on earth
- Explain how populations adapt to changing thermal conditions through plastic and evolutionary responses
- Explain the role of evolution and phenotypic plasticity in relation to climate change
- Account for the factors that constraints evolutionary processes

#### SKILLS

- Apply predictive ecosystem models to estimate how ecosystems are affected by global changes and land use
- Discriminate between species invasion from gradual migration due to climate changes and random species invasion

#### COMPETENCES

- Describe and use strategies that can mitigate greenhouse emission

#### TYPE OF INSTRUCTION

- Lectures, supplemented with project work, workshops, presentation seminars, laboratory tests

#### EXTENT AND EXPECTED WORKLOAD

150 hours

## EXAM

### EXAMS

Name of exam	Global Change Biology
Type of exam	Written or oral exam
ECTS	5
Assessment	7-point grading scale
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

## FACTS ABOUT THE MODULE

Danish title	Klimapåvirkning af biologiske systemer
Module code	K-BIO-K1-13
Module type	Course
Duration	1 semester
Semester	Spring

# ENVIRONMENTAL SOIL SCIENCE AND GEOSTATISTICS

## 2022/2023

### CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

#### LEARNING OBJECTIVES

##### KNOWLEDGE

- On fundamental soil physics.
- On soil texture and structure, physical and chemical phase distribution (solids, water, air), pore-size distribution, water retention, hydraulic conductivity, soil-water sorptivity, unsaturated zone water transport, gas diffusion and chemical transport, sorption and biodegradation.
- On the basic principle of 1D analytical and numerical water and contaminant transport modelling.
- On evaluating the uncertainty of measured data and model results.

##### SKILLS

- To measure soil hydraulic properties in the laboratory.
- To apply parameter models for water retention, hydraulic conductivity, gas diffusion, and chemical dispersion to measured data or as predictive tools.
- To program and apply analytical and simple numerical water and solute transport models to measured data or in risk assessment.
- To apply relevant geostatistical methods to measured data in the soil and groundwater zones.

##### COMPETENCES

- To perform preliminary risk assessment and evaluate the conditions for on-site or in-situ clean-up methods for contaminated soil sites.
- To structure and produce technical documentation of complex problems, methods and results.
- To communicate problems, findings and solutions graphical as well as oral to the relevant target audience.

##### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars, lab tests.

##### EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS project module, the workload is expected to be 150 hours for the student.

## EXAM

### EXAMS

Name of exam	Environmental Soil Science and Geostatistics
Type of exam	Written or oral exam Individual oral or written exam
ECTS	5
Assessment	Passed/Not Passed
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

## FACTS ABOUT THE MODULE

Danish title	Jordfysik og geostatistik
Module code	B-VM-K1-3
Module type	Course
Duration	1 semester
Semester	Autumn

# EXPERIMENTAL HYDROLOGY

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

### LEARNING OBJECTIVES

#### KNOWLEDGE

- On the groundwater system and its essential properties and parameters.
- On experimental methods for property and parameter estimation of the ground water zone.
- On uncertainty and limitations of the applied methods.

#### SKILLS

- To select, design and conduct suitable in-situ test for estimating saturated hydraulic properties.
- To select, design and conduct suitable laboratory test for estimating hydraulic saturated hydraulic properties.
- To analyse and evaluate test results and methods regarding suitability and reliability.
- To organise documentation and presentation of measured data.

#### COMPETENCES

- To describe, analyse, and evaluate a specific part of the groundwater system, regarding its composition and its properties through a planned investigation of the system.
- To structure and plan the project and the work in a group.
- To produce technical documentation of complex problems, methods and results in group cooperation.
- To communicate findings and solutions graphical as well as oral to the relevant target audience.

#### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars, lab tests.

#### EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS project module, the workload is expected to be 150 hours for the student.

## EXAM

### EXAMS

Name of exam	Experimental Hydrology
Type of exam	Written or oral exam Written or oral exam based on presentation seminar and mini-project report.
ECTS	5
Assessment	7-point grading scale
Type of grading	Internal examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

## FACTS ABOUT THE MODULE

# ECOSYSTEM ANALYSIS

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

The purpose of the project is to provide the student the tools to analyze environmental impacts and evaluate how the most important environmental impacts affect surrounding environments, on local as well as on global scales.

The project will focus on a natural environment where management aspects of the natural resources are an integral part of the ecosystem function.

## LEARNING OBJECTIVES

### KNOWLEDGE

Students who have passed the module should be able to

- account for the dominating factors that show important environmental impacts
- explain the differences between different management strategies based on differences in organizational structures, the emergence of international organizations and interaction with the market

### SKILLS

- write a project report following the standards of the field of study, include relevant original scientific literature, use the correct terminology, and communicate the research-based foundation and problem and results in writing, graphically and orally in a professionally reasoned and coherent way
- assess and select relevant original scientific literature and current scientific methods, models and other tools used in the project and assess the problem of the project and results in relevant scientific contexts and social conditions

### COMPETENCES

- handle the planning, implementation and management of complex and unpredictable research and/or developmental tasks and take professional responsibility to implement academic assignments and interdisciplinary collaborations
- take responsibility for own professional development and specialization

### TYPE OF INSTRUCTION

- Project

### EXTENT AND EXPECTED WORKLOAD

450 hours

## EXAM

### PREREQUISITE FOR ENROLLMENT FOR THE EXAM

- An approved PBL competency profile is a prerequisite for participation in the project exam

### EXAMS

Name of exam	Ecosystem Analysis
Type of exam	Oral exam based on a project

ECTS	15
Assessment	7-point grading scale
Type of grading	External examination
Criteria of assessment	The criteria of assessment are stated in the Examination Policies and Procedures

## FACTS ABOUT THE MODULE

Danish title	Økosystemanalyse
Module code	K-BIO-K2-39A

# MARINE POLLUTION

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

To provide fundamental insight into coastal marine waters including effects and prevention of natural and anthropogenic pollution

### LEARNING OBJECTIVES

#### KNOWLEDGE

Students who have passed the module should be able to

- explain physical, chemical and microbial processes in marine systems
- account for the most common types of marine pollution
- account for the exchange of matter between aquatic and terrestrial environments
- account for the processes: primary production, respiration and re-oxidation
- describe important organic and inorganic pollutants and pollution effects in coastal marine waters

#### SKILLS

- analyze microbial loops, food webs, and turnover of C, N, and S in aquatic environments and in sediments
- distinguish between pollution impacts on individuals, populations, and communities
- assess recreational and bathing water quality, and tools for fecal pollution source tracking

#### COMPETENCES

- evaluate the occurrence of inorganic nutrients, man-made pollutants, disease-causing microorganisms, and metal pollution in marine waters
- evaluate methods to prevent and alleviate antropogenic pollution in coastal marine waters

#### TYPE OF INSTRUCTION

- Lectures
- Workshops
- Excercises (individually and in groups)

#### EXTENT AND EXPECTED WORKLOAD

150 hours

### EXAM

#### EXAMS

Name of exam	Marine Pollution
Type of exam	Written or oral exam
ECTS	5
Assessment	7-point grading scale

# PROJECT-ORIENTED STUDY IN AN EXTERNAL ORGANISATION

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

### LEARNING OBJECTIVES

#### KNOWLEDGE

Students who have passed the module should be able to

- explain the scientific basis of the work carried out by the external organisation

#### SKILLS

- master the scientific methods and general skills related to the project work in the external organisation
- write a report following the standards of the field of study, use the correct terminology and document extensive use of relevant and original scientific literature, and communicate and discuss the project's foundation, problem and results in writing, graphically and verbally in a coherent way
- critically assess and select relevant original scientific literature and current scientific methods, models and other tools used in the project and assess and discuss the problem of the project and results in relevant scientific contexts and social conditions
- evaluate the potential of the project for further development, assessing and incorporating relevant economic, ethical, environmental and other socially relevant factors

#### COMPETENCES

- participate in development, innovation, and research and use scientific methods to solve complex tasks
- take professional responsibility to implement independent assignments and interdisciplinary collaborations
- independently take responsibility for own professional development and specialization

#### TYPE OF INSTRUCTION

- Project work, supervised by an external supervisor in collaboration with an internal supervisor at Aalborg University
- Project work in an external organisation must be in areas of relevance to the competence profile of the program

#### EXTENT AND EXPECTED WORKLOAD

900 hours

### EXAM

#### EXAMS

Name of exam	Project-Oriented Study in an External Organisation
Type of exam	Oral exam based on a project

# MASTER'S THESIS

## 2022/2023

### CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

#### LEARNING OBJECTIVES

##### KNOWLEDGE

Students who have passed the module should be able to

- explain the scientific basis and scientific issues in within the competence profile of the program
- explain the highest international research within the thesis subject area

##### SKILLS

- master the scientific methods and general skills related to the competence profile of the program
- write a project report following the standards of the field of study, use the correct terminology and document extensive use of relevant and original scientific literature, and communicate and discuss the project's research-based foundation and problem and results in writing, graphically and verbally in a professionally reasoned and coherent way
- Critically assess and select relevant original scientific literature and current scientific methods, models and other tools used in the project and asses and discuss the problem of the project and results in relevant scientific contexts and social conditions
- evaluate the potential of the project for further development, assessing and incorporating relevant economic, ethical, environmental and other societal relevant factors

##### COMPETENCES

- participate in and independently implement technological and scientific development and research, develop and implement experimental work and solve complex tasks using scientific methods
- handle the planning, implementation and management of complex and unpredictable research and/or developmental tasks and take professional responsibility to implement independent academic assignments and interdisciplinary collaborations
- independently take responsibility for own professional development and specialization

##### TYPE OF INSTRUCTION

Project work

##### EXTENT AND EXPECTED WORKLOAD

900 hours

# CONSERVATION BIOLOGY

**2022/2023**

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

To give the student a basic introduction to the discipline of conservation biology with a focus on current problems and potential solutions.

The course will comprise of lectures and exercises on the above-mentioned themes. For each theme the students will have the possibility to identify examples of threatened species and/or habitats and possible solutions to reduce, and in some cases eliminate, current threats to their conservation. These exercises will permit interested students to focus on issues of special importance to Denmark, and they will allow all students to present their findings to the rest of the group.

## LEARNING OBJECTIVES

### KNOWLEDGE

Students who have passed the module should be able to

- Describe human-induced and environmental factors that influence species, populations, habitats and biodiversity including genetic variation
- Describe how ecosystems and food chains are connected, and how their conservation may be affected by the loss or decline of a population or habitat
- Explain how invasive alien species can influence local ecosystems and, over time, have profound implications for conservation

### SKILLS

- Identify and describe the conservational value of different species and populations
- Identify “Keystone species”, where some species have an ecosystem role larger and more important than that suggested by their size and biomass
- Identify “Umbrella species”, where preservation of habitats and populations of sufficient size will contribute to conservation of many other species
- Use important tools for data collection and analyses concerning populations at risk, such as non-invasive genetic materials
- Assess potential solutions for conservation of species, populations and habitats at risk
- Use appropriate tools to collect data on species and populations in reference state as well as communities under environmental stress
- Use appropriate multivariate statistical analyses to assess biological communities and the environmental stressors affecting them

## TYPE OF INSTRUCTION

The program is based on a combination of academic, problem-oriented and interdisciplinary approaches and organized based on the following work and evaluation methods that combine skills and reflection:

- Lectures
- Workshop exercises (individually and in groups)
- Project work and exercises in labs
- Teacher feedback

## EXTENT AND EXPECTED WORKLOAD

150 hours

**EXAM****EXAMS**

# HYDRODYNAMICS AND TIME SERIES ANALYSIS OF ENVIRONMENTAL FLOWS

**2022/2023**

## RECOMMENDED PREREQUISITE FOR PARTICIPATION IN THE MODULE

The module adds to the knowledge obtained in Fundamental Hydraulics, Fundamental Statistics and Differential Equations.

## CONTENT, PROGRESS AND PEDAGOGY OF THE MODULE

### LEARNING OBJECTIVES

#### KNOWLEDGE

- On advanced hydrodynamics.
- On numerical modelling of turbulent flows.
- On modelling of transport and mixing.
- On environmental flow in coastal zones and estuaries.
- On basic time series analysis.

#### SKILLS

- To perform a systematic analysis of the physics in the coastal zone and estuaries.
- To perform non-stationary time simulations with advanced hydrodynamic models.
- To analyse time series for persistence and harmonic elements.
- To analyse geophysical flows in the ocean and coastal zone.

#### COMPETENCES

- To evaluate and handle data that forms the basis of hydrodynamic and water quality modelling.
- To structure and produce technical documentation of complex problems, methods and results.
- To communicate problems, findings and results graphically as well as oral to the relevant target audience.

### TYPE OF INSTRUCTION

Lectures, etc. supplemented with project work, workshops, presentation seminars, lab tests.

### EXTENT AND EXPECTED WORKLOAD

Since it is a 5 ECTS project module, the workload is expected to be 150 hours for the student.

## EXAM

# GRUNDLÆGGENDE SPILDEVANDSRENSNING

**2022/2023**

## ANBEFALEDE FAGLIGE FORUDSÆTNINGER FOR AT DELTAGE I MODULET

Kurset bygger på viden opnået gennem generel mikrobiologi og kemi på gymnasieniveau samt gennem kursusmodulet Afløbsteknik og hydraulik eller lignende.

## MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

### LÆRINGSMÅL

#### VIDEN

Studerende, der har gennemført modulet:

- Skal have viden om grundlæggende og videregående spildevandsrensning
- Skal have viden om teorier bag fysiske, kemiske og biologiske renseprocesser
- Skal have viden om renseteknologier for fjernelse af kulstof, kvælstof og fosfor fra kommunalt spildevand

#### FÆRDIGHEDER

Studerende, der har gennemført modulet:

- Skal kunne karakterisere kommunalt spildevand
- Skal kunne karakterisere og kvantificere de væsentligste kemisk/biologisk/fysiske processer, der anvendes til rensning af kommunalt spildevand
- Skal kunne karakterisere og kvantificere de væsentligste fysiske separationsprocesser
- Skal kunne karakterisere de væsentligste processer ved anaerob udrådning af slam
- Skal kunne udføre skitse-design og grov-dimensionering af biologiske processtanke på kommunale renseanlæg
- Skal kunne udføre skitse-design og grov-dimensionering af forklaringstanke og efterklaringstanke
- Skal kunne udføre skitse-design og grov-dimensionering af rådnetanke
- Skal kunne supportere drift og optimering af kommunale renseanlæg for fjernelse af kvælstof og fosfor
- Skal kunne opstille modeller for biologiske processer i aktiv slam anlæg
- Skal kunne opstille modeller for omsætning i biofilm på fastfilm anlæg

#### KOMPETENCER

Studerende, der har gennemført modulet:

- Have evnen til at planlægge og designe kommunale renseanlæg
- Have evnen til at analysere funktionen af kommunale renseanlæg

#### UNDERVISNINGSFORM

Forelæsninger evt. suppleret med workshops, præsentationsseminarer, laboratorieforsøg m.m.

#### OMFANG OG FORVENTET ARBEJDSINDSAT

Kursusmodulets omfang er 5 ECTS svarende til 150 timers studieindsats.

## EKSAMEN

### PRØVER

Prøvens navn	Grundlæggende spildevandsrensning
Prøveform	Skriftlig eller mundtlig Individuel mundtlig eller skriftlig prøve. Prøveformen fastsættes ved semesterstart.
ECTS	5
Bedømmelsesform	7-trins-skala
Censur	Intern prøve
Vurderingskriterier	Vurderingskriterierne er angivet i Universitetets eksamensordning

### FAKTA OM MODULET

# DANSKE NATURTYPER

**2022/2023**

## MODULETS INDHOLD, FORLØB OG PÆDAGOGIK

Formålet med kurset er at give studerende kendskab til et bredt udsnit af danske naturtyper og naturområder, og hvilke særlige kendetegn, herunder dyr, planter samt geologiske og geografiske forhold, som er karakteristiske for de enkelte naturtyper, danske dyr og planter, samt naturbeskyttelse i Danmark og EU.

Kurset vil omfatte et bredt udvalg af danske naturtyper og beskrive hvilke forskelligheder der har betydning for et områdes flora og fauna. Der vil afholdes ekskursioner til forskellige danske naturtyper, f.eks. højmose, hede, klithede, overdrev, eng, strand-overdrev og -eng, marsk, skov og vådområder, samt besøg i nogle Danmarks mest interessante natur-lokaliteter, f.eks. Lille Vildmose, Vejlerne, Hanstedreservatet eller Råbjerg Mile, og naturgenopretnings-projekter, f.eks. Vilsted Sø eller Skjern Ådal.

På de enkelte lokaliteter udføres feltarbejde i form af bestemmelse af karakteristiske planter, insekter og andre dyr og evt. jordbundsanalyser. Ekskursionerne suppleres med forelæsninger og gruppearbejde, og der udfærdiges en rapport med en kort karakterisering af hver enkelt lokalitet, som den studerende senere kan bruge som sit eget opslagsværk.

## LÆRINGSMÅL

### VIDEN

Studerende, der gennemfører modulet, skal kunne

- demonstrere et overordnet kendskab til Danmarks geologi og forskelle i naturtyper, jordbunds- og klimatiske forhold i de forskellige landsdele
- beskrive karakteristiske naturtyper og interessante natur-lokaliteter i Danmark
- redegøre for et bredt udsnit af Danmarks planter og deres krav til miljøet hvor de gror
- redegøre overordnet for Danmarks fauna
- forklare faunistisk og floristisk succession
- redegøre for Naturbeskyttelsesloven og andre love, bestemmelser, regulativer og offentlige planer, som vedrører beskyttelsen af naturen, og have kendskab til offentlig naturforvaltning
- redegøre væsentlige problemstillinger på natur- og miljø-området (eutrofiering, fragmentering af naturområder, biodiversitet m.v.) samt væsentlige interessekonflikter på miljøområdet (opdyrkning, byudvikling, landinvinning, jagt og fiskeri m.v.)

### FÆRDIGHEDER

- bestemme planter vha. nøgler
- Skal kunne karakteriserer naturtyper på baggrund af en lokalitets vegetation, dyreliv og geologi
- Skal kunne vurdere hvilke lov- og regulativ-mæssige beskyttelseskrav, som omfatter en given lokalitet

## UNDERVISNINGSFORM

- Ekskursioner
- Feltarbejde
- Gruppearbejde
- Forelæsninger

## OMFANG OG FORVENTET ARBEJDSINDSAT

150 timer

## EKSAMEN

### PRØVER
