TABLE OF CONTENTS

§ 1: Preface	4
§ 2: Basis in Ministerial orders	4
§ 3: Campus	4
§ 4: Faculty affiliation	4
§ 5: Study board affiliation	4
§ 6: Affiliation to corps of external examiners	4
§ 7: Admission requirements	4
§ 8: The programme title in Danish and English	5
§ 9: Programme specifications in ECTS credits	5
§ 10: Rules concerning credit transfer (merit), including the possibility for choice of modules that are part of another programme at a university in Denmark or abroad	5
§ 11: Exemptions	5
§ 12: Rules for examinations	5
§ 13: Rules concerning written work, including the Master's Thesis	5
§ 14: Requirements regarding the reading of texts in a foreign language	6
§ 15: Competence profile on the diploma	6
§ 16: Competence profile of the programme	6
§ 17: Structure and Contents of the programme	11
§ 18: Overview of the programme	11
§ 19: Additional information	15
§ 20: Commencement and transitional rules	15
§ 21: Amendments to the curriculum and regulations	15

§ 1: PREFACE

Pursuant to consolidation Act 391 of April 10, 2024 on Universities (the University Act), the following is established.

The programme also follows the Examination Policies and Procedures incl. the Joint Programme Regulations for Aalborg University

§ 2: BASIS IN MINISTERIAL ORDERS

The Master's programme is organised in accordance with the Ministry of Higher Education and Science's Order no. 2285 of December 1, 2021 on Full-time University Programmes (the University Programme Order) with subsequent changes and Ministerial Order no. 2271 of December 1, 2021 on University Examinations (the Examination Order) with subsequent changes. Further reference is made to Ministerial Order no. 51 of January 14, 2024 (the Admission Order) and Ministerial Order no. 1125 of July 4, 2022 (the Grading Scale Order)

§ 3: CAMPUS

The programme is offered in Aalborg.

§ 4: FACULTY AFFILIATION

The Master's programme falls under The Technical Faculty of IT and Design, Aalborg University.

§ 5: STUDY BOARD AFFILIATION

The Master's programme falls under Study Board of Planning and Surveying

§ 6: AFFILIATION TO CORPS OF EXTERNAL EXAMINERS

The Master's programme is associated with the Civil engineering corps of external examiners.

§ 7: ADMISSION REQUIREMENTS

Applicants with a legal right of admission (retskrav):

Applicants with the following degree have a legal right of admission:

- Bachelor of Science (BSc) in Engineering in Urban, Energy and Environmental Planning, Aalborg University (Campus Aalborg)

Applicants without legal right of admission:

- Bachelor of Science (BSc) in Geography, Aalborg University
- Bachelor of Science (BSc) in Engineering in Urban, Energy and Environmental Planning, Aalborg University (Campus Copenhagen)

Admission to the master's programme in Urban Energy and Environmental Planning requires that the applicant has passed a relevant qualifying bachelor's degree programme. A bachelor's degree programme is defined as relevant if the degree programme provides competencies to a minimum of 30 ECTS within fundamental urban, energy and environmental planning areas. For example – but not limited to the following subject areas:

- Minimum 30 ECTS within the fundamental urban, energy and environmental area (for instance, but not limited to, urban planning, urban geography, urban design, mobility planning, spatial planning, energy resources, energy conversion, renewable energy sources, energy systems, climate change planning, environmental science, environmental impact assessments, environmental management, waste planning, hydraulics, hydrology, materials science, GIS)

As a prerequisite for admission to the master's programme, students must have completed a bachelor programme in technical sciences, a bachelor of engineering programme or a bachelor in natural science.

All applicants without a legal right must prove that their English language qualifications is equivalent to level B (Danish level) in English

§ 8: THE PROGRAMME TITLE IN DANISH AND ENGLISH

The Master's programme entitles the graduate to the Danish designation *Civilingeniør, cand.polyt. i by-, energi- og miljøplanlægning med specialisering i:*

- Byplanlægning

- Miljøledelse og bæredygtighed

- Energiplanlægning, *eller*

- Byer og bæredygtighed

The English designation is: Master of Science (MSc) in Engineering (Urban, Energy and Environmental Planning) with specialisation in:

- Urban Planning and Management

- Sustainable Energy Planning and Management

- Environmental Management and Sustainability Science, *or*

- Cities and Sustainability

§ 9: PROGRAMME SPECIFICATIONS IN ECTS CREDITS

The Master's programme is a 2-year, research-based, full-time study programme. The programme is set to 120 ECTS credits.

§ 10: RULES CONCERNING CREDIT TRANSFER (MERIT), INCLUDING THE POSSIBILITY FOR CHOICE OF MODULES THAT ARE PART OF ANOTHER PROGRAMME AT A UNIVERSITY IN DENMARK OR ABROAD

The Study Board can approve that passed programme elements from other educational programmes at the same level replaces programme elements within this programme (credit transfer).

Furthermore, the Study Board can, upon application, approve that parts of this programme is completed at another university or a further education institution in Denmark or abroad (pre-approval of credit transfer).

The Study Board's decisions regarding credit transfer are based on an academic assessment.

§ 11: EXEMPTIONS

The Study Board's possibilities to grant exemption, including exemption to further examination attempts and special examination conditions, are stated in the Examination Policies and Procedures published at this website:

<https://www.studyservice.aau.dk/rules>

§ 12: RULES FOR EXAMINATIONS

The rules for examinations are stated in the Examination Policies and Procedures published at this website:

<https://www.studyservice.aau.dk/rules>

§ 13: RULES CONCERNING WRITTEN WORK, INCLUDING THE MASTER'S THESIS

In the assessment of all written work, regardless of the language it is written in, weight is also given to the student's formulation and spelling ability, in addition to the academic content. Orthographic and grammatical correctness as well as stylistic proficiency are taken as a basis for the evaluation of language performance. Language performance must always be included as an independent dimension of the total evaluation. However, no examination can be assessed as 'Pass' on the basis of good language performance alone; similarly, an examination normally cannot be assessed as 'Fail' on the basis of poor language performance alone.

The Study Board can grant exemption from this in special cases (e.g., dyslexia or a native language other than Danish).

The Master's Thesis must include an English summary. If the project is written in English, the summary can be in Danish. The summary is included in the evaluation of the project as a whole.

§ 14: REQUIREMENTS REGARDING THE READING OF TEXTS IN A FOREIGN LANGUAGE

It is assumed that the student can read academic texts in English and use reference works, etc., in English and other European languages.

§ 15: COMPETENCE PROFILE ON THE DIPLOMA

The following competence profile will appear on the diploma:

A Candidatus graduate has the following competency profile:

A Candidatus graduate has competencies that have been acquired via a course of study that has taken place in a research environment.

A Candidatus graduate is qualified for employment on the labour market based on his or her academic discipline as well as for further research (PhD programmes). A Candidatus graduate has, compared to a Bachelor, developed his or her academic knowledge and independence so as to be able to apply scientific theory and method on an independent basis within both an academic and a professional context.

§ 16: COMPETENCE PROFILE OF THE PROGRAMME

Urban Planning and Management (UPM)

For the specialisation in Urban Planning and Management, the candidate acquires, in addition to the competence profile of the diploma, the following:

Knowledge

- Has basic knowledge of the implications of research ethics
- Has understanding of theories of science, research design and research methods relevant for conducting research within the field of planning
- Has thorough knowledge of theories and methods in planning, administration and/or management within the public and private sector
- Basic understanding of the technical, structural and social conditions connected with the development and infrastructures of towns and regions
- Understanding of the complex processes taking place in connection with the preparation and implementation of strategies and plans, where both public and private interests prevail
- Possesses insight into and understanding of the social-technical conditions under which strategies, plans and projects are implemented.
- Knowledge and understanding of the history of modern urban planning
- Knowledge and understanding of the complexities of planning for sustainable urban development
- Knowledge and understanding of the scientific value foundations of different urban planning theories
- Knowledge of planning processes and an understanding of their relation to politics and power in the field of urban planning
- Knowledge and understanding of the role of the planner in managing power relations

Skills

- Can identify relevant research problems within the field of planning
- Can design a research project and use relevant research methods in order to analyse a chosen problem
- Can analyse the technical and social context of strategies and plans
- Can analyse and prepare strategies, plans and projects at different levels
- Can assess if strategies, plans, projects or infrastructure systems are expedient and feasible in technical, economic, environmental, and social respects

- Can involve the public and relevant actors at all levels in planning processes
- Can reflect on ethical matters in connection with professional practice
- Can impart research-based knowledge within the field of planning and discuss professional and scientific problems with both colleagues and non-specialists.
- Can analyse and evaluate urban policies and plans in relation to their immediate as well as long-term contribution to sustainable urban development
- Can use urban theories to analyse historical and contemporary planning practices and identify contemporary and potential planning challenges
- Can prepare concepts, proposals and solutions to guide future urban planning objectives
- Can analyse and evaluate a planning process, and critically assess power dynamics in the practices of planning
- Can make use of relevant theories, concepts and methods to analyse the practice of planning and critically evaluate the need for the planner to intervene in different contexts

Competencies

- Can act as part of private, non-governmental and knowledge organisations
- Can understand and on a scientific basis reflect on the knowledge and problems of the field of planning and in this relation identify important social problems
- Can assess the expediency of different theories and methods for independent analysis and professional problem solution
- Can formulate and analyse essential problems independently, systematically and critically by using relevant scientific methods
- Can act as part of interdisciplinary teams within the field of planning, working with the preparation and implementation of plans and strategies in Danish or international contexts
- Can develop proposals for management instruments to secure the implementation of strategies, plans and projects
- Can use the acquired knowledge to provide and initiate open and democratic planning processes
- Can participate in research within the field of planning and in this way contribute to the development of the profession
- Can independently develop own competencies and specialisation
- Can independently and critically manage work and development situations that are complex, unpredictable and require new solutions
- Can independently conduct research on the historical and contemporary development of cities and identify contemporary planning problems
- Can carry out focused, critical and well-informed research to support the planning for sustainable and liveable cities
- Can independently and critically manage planning processes that are influenced by power dynamics

Sustainable Energy Planning and Management (SEPM)

For the specialisation in Sustainable Energy Planning and Management, the candidate acquires, in addition to the competence profile of the diploma, the following:

Knowledge

- Has understanding of theories of science, research design and research methods relevant for conducting research within the field of planning
- Has understanding of the technical, structural and social conditions connected with the development and infrastructures of towns and regions
- Has insight into and understanding of the social-technical conditions under which strategies, plans and projects are implemented
- Has knowledge and understanding of energy problems and energy planning at the level of companies and organisations, as well as on a societal level
- Has knowledge and understanding of institutional and organisational conditions and public regulation related to energy planning in different contexts
- Has knowledge and understanding of theories, evaluation methods and tools in relation to the analysis of energy problems
- Has knowledge and understanding of energy systems and energy plants, including technical and economic energy system analysis
- Has knowledge and understanding of international energy policies, including their origin and historical context, their implementation effects and connection with decision processes

Skills

- Can identify relevant research problems within the field of planning
- Can design a research project and use relevant research methods to analyse a chosen problem
- Can analyse the technical and social context of strategies and plans
- Can analyse and prepare strategies, plans and projects at different levels
- Can assess if strategies, plans, projects or infrastructure systems are expedient and feasible in technical, economic, environmental, and social respects
- Can impart research-based knowledge within the field of planning and discuss professional and scientific problems with both colleagues and non-specialists
- Can critically analyse energy-related problems, and understand, use and analyse evaluation methods and tools for socio-economic impact analyses
- Can understand and reflect on connections between institutions, public regulation and organisations, their dynamics as well as their interaction with the surrounding society
- Can simulate the operation of energy systems with multiple dependent energy sources, energy conversion technologies and end-use energy demands
- Can formulate and analyse proposals for strategies within energy planning, which are based on the analysis of the societal conditions
- Can critically analyse sustainable energy-related problems in relation to national and international energy policies
- Can analyse and assess energy systems from technical, economic and environmental criteria

Competencies

- Can act as part of public, private, non-governmental and knowledge organisations
- Can understand and on a scientific basis reflect on the knowledge and problems of the field of planning and in this relation identify important social problems
- Can assess the expediency of different scientific methods for independent analysis and professional problem solution
- Can formulate and analyse essential problems independently, systematically and critically by using relevant scientific methods
- Can act as part of interdisciplinary teams within the field of planning, working with the preparation and implementation of plans and strategies in Danish or international contexts
- Can use the acquired knowledge to provide and initiate open and democratic planning processes
- Can participate in research within the field of planning and in this way contribute to the development of the profession
- Can independently develop own competencies and specialisation
- Can independently initiate and participate in interdisciplinary energy planning on a company, organisational level or societal level
- Can reflect critically on project-related choices of tools and their significance for analyses and results
- Can develop adequate theoretical approaches linked to specific problems/challenges and independently collect the relevant data and assess the quality and reliability of these data
- Can independently start and participate in interdisciplinary planning tasks and cooperation across societal levels, nationalities and cultures
- Can prepare proposals for technical system design and combine it with the design of public regulation and strategies in energy planning
- Can develop and apply spatial modelling methods in an energy planning context

Environmental Management and Sustainability Science (EMSS)

For the specialisation in Environmental Management and Sustainability Science, the candidate acquires, in addition to the competence profile of the diploma, the following:

Knowledge

- Has basic knowledge of the implications of research ethics
- Has understanding of theories of science, research design and research methods relevant for conducting research within the field of environmental planning and sustainability science

- Has thorough knowledge of theories and methods in planning, administration and/or management within the public and private sector
- Basic understanding of the technical, structural and social conditions connected with the development and infrastructures of towns and regions
- Understanding of the complex processes taking place in connection with the preparation and implementation of strategies and plans, where both public and private interests prevail
- Possesses insight into and understanding of the social-technical conditions under which strategies, plans and projects are implemented
- Understanding of measurement and indicator techniques for specific resource types
- Knowledge and understanding of environmental challenges at the level of companies and organisations, as well as on a societal level
- Knowledge and understanding of institutional and organisational conditions and public regulation related to environmental planning in different national and cultural contexts
- Knowledge and understanding of how impact assessment, tools and evaluation methods connects to societal decision-making on e.g. large infrastructures, technologies or spatial developments

Skills

- Can identify relevant research problems within the field of planning
- Can design a research project and use relevant research methods in order to analyse a chosen problem
- Can analyse the technical and social context of strategies and plans
- Can analyse and prepare strategies, plans and projects at different levels
- Can assess if strategies, plans, projects or infrastructure systems are expedient and feasible in technical, economic, environmental, and social respects
- Can involve the public and relevant actors at all levels in planning processes
- Can reflect on ethical matters in connection with professional practice
- Can impart research-based knowledge within the field of planning and discuss professional and scientific problems with both colleagues and non-specialists.
- Can describe and explain the technologies used to extract and use specific natural resources and can discuss possible innovations and their applicability depending on framework conditions
- Can describe existing natural resource management approaches that are applied to use, protect and/or restore specific natural resources
- Can calculate, assess and interpret total impacts of product and service systems using multiple methods
- Can communicate results of assessments to both other peers and non-specialists
- Can critically analyse environment and sustainability problems, and understand, use and analyse evaluation methods and tools for impact analyses
- Can understand and reflect on connections between institutions, public regulation and organisations, their dynamics as well as their interaction with the surrounding society
- Can critically analyse sustainability issues in relation to national and international policies

Competencies

- Can act as part of public, private, non-governmental and knowledge organisations
- Can understand and on a scientific basis reflect on the knowledge and problems of the field of planning and in this relation identify important social problems
- Can assess the expediency of different theories and methods for independent analysis and professional problem solution
- Can formulate and analyse essential problems independently, systematically and critically by using relevant scientific methods
- Can act as part of interdisciplinary teams within the field of planning, working with the preparation and implementation of plans and strategies in Danish or international contexts
- Can develop proposals for management instruments to secure the implementation of strategies, plans and projects
- Can use the acquired knowledge to provide and initiate open and democratic planning processes
- Can participate in research within the field of planning and in this way contribute to the development of the profession

- Can independently develop own competencies and specialisation
- Can formulate and analyse essential problems independently, systematically and critically by using relevant scientific methods
- Can act as part of interdisciplinary teams in Danish or international contexts
- Can reflect critically on project-related choices of tools and their significance for analyses and results
- Can independently start and participate in interdisciplinary planning tasks and cooperation across societal levels, nationalities and cultures
- Can prepare proposals for technical system design and combine it with the design of public regulation and strategies

Cities and Sustainability (CiSu)

For the specialisation in Cities and Sustainability, the candidate acquires, in addition to the competence profile of the diploma, the following:

Knowledge

- Has profound knowledge within one or more of the following subject areas that, in selected topics, are based on the highest international research
 - Sustainable Development (Goals)
 - Climate Change
 - Climate Change Adaptation and Mitigation
 - Planetary Boundaries
 - Environmental and Climate Justice
 - Urban Design
 - Urban Mobility
 - Risk Assessment and Management
 - Environmental Protection and Management
 - Waste and Resource Management
 - Integrated Water Resources Management
 - GIS and Remote Sensing
 - Sustainability Assessment
 - Material Flow Analysis
- Has basic knowledge of the implications of research ethics
- Has profound knowledge of relevant national and international research work
- Has profound knowledge of theories and methods in planning, administration and/or management within the public and private sector
- Possesses specialist understanding in continuation of the previous degree/or new professional competence in addition to the previous degree
- Has thorough understanding of the technical, structural and social conditions connected with the development and infrastructures of cities
- Possesses insights into and understanding of the socio-technical and socio-economic conditions under which urban environmental and sustainability policies, strategies, plans, technologies and projects are implemented

Skills

- Can handle the methods and tools of contemporary urban development as well as general skills connected with occupation within the field
- Can assess and choose among the theories, methods, tools and general skills of urban development, and on a scientific basis draw up new models of analysis and solution
- Can analyse the technical, economic and social context of which strategies and plans within sustainable urban development are a part
- Can analyse and prepare strategies, plans and projects at different levels
- Can assess if strategies, plans, projects or infrastructure systems are expedient and feasible in technical, economic, environmental, and social respects
- Can involve the public and relevant actors at all levels
- Can reflect on ethical matters in connection with professional practice

- Can independently make and motivate professionally related decisions and when necessary carry out investigations procuring a sufficient basis of decision
- Can impart research-based knowledge within the field of sustainable urban development and discuss professional and scientific problems with both colleagues and non-specialists.

Competencies

- Can act as part of public, private, non-governmental and knowledge organisations
- Can understand and on a scientific basis reflect on the knowledge and problems of the field of sustainability and urban development, and in this relation identify important socio-technical and socio-economic problems
- Can formulate and analyse essential problems independently, systematically and critically by using relevant scientific methods
- Can assess the expediency of different theories and methods for independent analysis and professional problem solution
- Can act as part of interdisciplinary teams within the field of urban development, working with the preparation and implementation of policies, plans and strategies in national and/or international contexts
- Can participate in research within the field of sustainable urban development and in this way contribute to the enhancement of the profession
- Can independently take responsibility for and develop own competencies and specialisation

§ 17: STRUCTURE AND CONTENTS OF THE PROGRAMME

The programme is structured in modules and organised as a problem-based study. A module is a programme element or a group of programme elements, which aims to give students a set of professional skills within a fixed time frame specified in ECTS credits, and concluding with one or more examinations within specific exam periods. Examinations are defined in the curriculum.

The programme is based on a combination of academic, problem-oriented and interdisciplinary approaches and organised based on the following work and evaluation methods that combine skills and reflection:

- lectures
- class teaching
- project work
- workshops
- assignments (individually and in groups)
- teacher feedback
- reflection
- portfolio work
- study group/study circle
- etc.

§ 18: OVERVIEW OF THE PROGRAMME

The tables below presents an overview of project modules and course modules at the four semesters of the master's programme.

All modules are assessed through individual grading according to the 7-point scale *or* passed/not passed. All modules are assessed by external examination (external grading) *or* internal examination (internal grading) *or* by assessment by the supervisor only.

Offered as: 1-professional

Specialisation: Urban Planning and Management

Curriculum for the Master's Programme in Urban, Energy and Environmental Planning, 2025

Module name	Course type	ECT S	Applied grading scale	Evaluation method	Assessment method	Language
1 SEMESTER						
Sustainable Urban Planning (PLUPMK25101)	Project	20	7-point grading scale	Internal examination	Oral exam based on a project	English
Planning History and Urban Theory (PLUPMK25102)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English
Planning for Urban Sustainability (PLUPMK25103)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
2 SEMESTER						
Power in Planning (PLUPMK25201)	Project	15	7-point grading scale	External examination	Oral exam based on a project	English
The Deliberative Planner (PLUPMK25202)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
Planning Theory (PLUPMK25203)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English
The Socio-Technical Context of Planning (PGLBEMK17201)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English
3-4 SEMESTER Option A						
Master's Thesis (PLBEMK22303)	Project	60	7-point grading scale	External examination	Master's thesis/final project	English
3 SEMESTER Option B						
Professional Development (PLBEMK23302)	Project	25	7-point grading scale	Internal examination	Oral exam based on a project	English
Project Management for Planners (PLBEMK23303)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
4 SEMESTER						
Master's Thesis (PLBEMK22401)	Project	30	7-point grading scale	External examination	Master's thesis/final project	English

Offered as: 1-professional						
Specialisation: Sustainable Energy Planning and Management						
Module name	Course type	ECT S	Applied grading scale	Evaluation method	Assessment method	Language
1 SEMESTER						
Sustainable Energy Planning in a Technical and Business Economic Perspective (PLSEPMK25101)	Project	20	7-point grading scale	Internal examination	Oral exam based on a project	English
Energy Project Evaluation (PLSEPMK25102)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English

Energy System Analysis 1 (PLSEPMK25103)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
2 SEMESTER						
Sustainable Energy Planning in an Institutional and Societal Perspective (PLSEPMK25201)	Project	15	7-point grading scale	External examination	Oral exam based on a project	English
Sustainable Energy Policy and Planning (PLSEPMK25202)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
Energy System Analysis 2 (PLSEPMK25203)	Course	5	Passed/Not Passed	Internal examination	Oral exam based on a project	English
The Socio-Technical Context of Planning (PGLBEMK17201)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English
3-4 SEMESTER Option A						
Master's Thesis (PLBEMK22303)	Project	60	7-point grading scale	External examination	Master's thesis/final project	English
3 SEMESTER Option B						
Professional Development (PLBEMK23302)	Project	25	7-point grading scale	Internal examination	Oral exam based on a project	English
Project Management for Planners (PLBEMK23303)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
4 SEMESTER						
Master's Thesis (PLBEMK22401)	Project	30	7-point grading scale	External examination	Master's thesis/final project	English

Offered as: 1-professional

Specialisation: Environmental Management and Sustainability Science

Module name	Course type	ECTS	Applied grading scale	Evaluation method	Assessment method	Language
1 SEMESTER						
Sustainability Management in Organisations (PLEMSSK25101)	Project	20	7-point grading scale	Internal examination	Oral exam based on a project	English
Sustainable Consumption and Production (PGLEMSK17102)	Course	5	Passed/Not Passed	Internal examination	Written or oral exam	English
Sustainable Products and Services (PGLEMSK17103)	Course	5	7-point grading scale	Internal examination	Written or oral exam	English
2 SEMESTER						
Sustainability Management in a Societal and Institutional Perspective (PLEMSSK22202)	Project	15	7-point grading scale	External examination	Oral exam based on a project	English

Master's Thesis (PLBEMK22401)	Project	30	7-point grading scale	External examination	Master's thesis/final project	English

International or National Credit

After pre-approval by the Study Board, the 3rd semester may be transferred to another educational institution. Approval (pre-credit) requires that these studies in question can give the student appropriate know-ledge, skills and competencies.

§ 19: ADDITIONAL INFORMATION

All students who have not participated in Aalborg University's PBL introductory course during their Bachelor's degree must attend the introductory course "Problem-based Learning and Project Management". The introductory course must be approved before the student can participate in the project exam. For further information, please see Department of Sustainability and Planning's website.

§ 20: COMMENCEMENT AND TRANSITIONAL RULES

This curriculum is approved by the dean and enters into force as of September 1, 2025.

The Study Board does not offer teaching after the previous curriculum from 2022 after the summer examination 2026.

The Study Board will offer examinations after the previous curriculum, if there are students who have used examination attempts in a module without passing. The number of examination attempts follows the rules in the Examination Order.

§ 21: AMENDMENTS TO THE CURRICULUM AND REGULATIONS
